4 PROCESSORS

### Problem 3

- 1) Baking cookies. When baking cookies, you can involve more friends to help with baking process. Each person can take on a specific task, like mixing the dough, shaping cookies, etc. With more helpers you can bake more without significantly increasing the time it takes to finish.
- 2) Copying files. Imagine you want to copy a text book if you divide the task and use more scanner/printer, you can decrease the time it takes to copy the text book.
